Al Submitted (01-DEC-2001) Wellcome Trust Sanger Institute, Hinxton, humquery@anger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Nov 30, 2001 this sequence version replaced gi:16973865.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORNEEP: Information on the WORNEEP thter.//www.sanger.ac.uk/Projecte/Claimer.

* NOTE: This is a 'working draft' sequence. It currently
consists of 8 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have

Abbuilted (03-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, Call 13A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requestEs clonerequest@sanger.ac.uk clone requestEs: clonerequest@sanger.ac.uk Clone on Dec 5, 2000 this sequence version replaced gi:11493283. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with that a sequence has been finished according to sequence submission orresponding to the overlapping clone, as we submit sequences with all overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequence map criteria and follows. An attempt is made to resolve all sequence is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL: Sw: SMISSEROR: Tr: TREMBL: Wp:, WORMPEP: Information on the WORMPEP database can be found at database can be found at callows. Control or the WORMPEP database can be found at the constructed by the sanger centre chromosome 1 constructed by the Sanger Centre Chromosome 1 metry.//www.sanger.ac.uk/FROPChr1

RR4-686J16 is from the library RC1-4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/pacpac/home.htm

VECTOR: DOTGY: DOTGY-CONE SAUGHT of Conservation only once, except for a 100 base overlap. The true left end of clone RP4-686J16 is at 1573 in this sequence. The Location that the database sections only once concept of all one RP4-866J16 is at 1573 in this sequence.
AL356748 97559 bp DNA linear PRI 04-DEC-2000 Human DNA sequence from clone RP4-686J16 on chromosome 1, complete sequence.

                                          CLONE LENGTH: This sequence does not necessarily represent the
```

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing. ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar. QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation. /note="overlaps bases 1. .208 of clone AC007537" /function="clone overlap" 1. .144 /rpt_family="Tigger3(Golem)" /organism="Homo sapiens" /db_xref="taxon:9606" /rpt_family="MIR" /rpt_family="Limec" complement///or complement(1586, 1995) /rpt_family="MSTA" complement[4287. .4578)

us-09-942-310-2_copy_5_5.rge

```
30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; W., WORMPEP; Information on the WORWPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 10. constructed by the Sanger Centre Chromosome 10 Mapping Group. Purther information can be found at http://www.sanger.ac.uk/HGP/Chr10 RPI1-359E7 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further dettails see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                    IMPORTANT: This sequence is not the entire insert of clone RP11-359E7 It may be shorter because we sequence overlapping sections only once, except for a short overlap. The true right end of clone RP11-359E7 is at 12428 in this sequence. The true right end of clone RP11-359E7 is at 2000 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PRI 16-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2 (bases 1 to 130965)

On Nov 17, 2001 this sequence version replaced gi:14970653.

During sequence assembly date is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AL133461 124328 bp DNA linear PRI 16-NOV-2001

The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene. The promoter region was amplified by PCR from leucocyte DNA of over 50 individuals, and sequenced.

8 Previously unknown single nucleotide polymorphisms (SNP) were identified. These were at: base 36 (base -1584 according to the muman Cytochrome P450 Allele Nomenclature), where the SNP was C to G, occurring at an estimated frequency of approximately 20% in the whole population, and resulting in increased enzyme activity; consition 194 (-1426), C to T, approximately 20% frequency, neutral function; position 385 (-1235), A to G, approximately 50% interpretation 199 (-1426), C to T, approximately 50% frequency, neutral function; position 620 (-1000), G to A, approximately 30% frequency, unknown function; position 940 (-680), G to A, approximately 30% frequency, unknown function; position 950 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position 50 (-1000), G to A, approximately 30% frequency, unknown function; position is claimed (see Ani26179).

The invention provides a method of diagnomicing alsorder related to reduced or enhanced capacity for clearance of Cyp206 substrates

Contact A, approximately approximately for clearance of Cyp206 substrates

Contact A, by determining the presence of a mutation in the Cyp206

Contact A, by with increased environmentation in the Cyp206

```
A polynucleotide capable of hybridizing to CYP2D6 promoter useful for the optimization of drug therapies using substrates of cytochrome P-450
                                               Gaps
                                                                                                                                                                                                                                                                                 Human cytochrome P450 CYP2D6 gene promoter (G mutation at -1584 bp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antagonist, tricyclic antidepressant, selective serotonin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the CYP2D6 promoter. The novel variant forms of the CYP2D6 gene provided by the invention provide the potential for the development of a pharmacodynamic profile of farugs for a given patient. The finding and characterization of variations in the CYP2D6 gene, and diagnostic tests for the discrimination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of at position -1584 bp with increased enzyme activity. The C to G single nucleotide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates (antiarhythmic, beta adrenergic receptor

                                                                                                                Gaps
different alleles in human individuals, provide a very potent tool for improving the therapy of diseases with drugs that are targets of the CYP2D6 gene production, and whose metabolism is therefore dependent on CYP2D6 activity.

Note: The present sequence is not shown in the specification but is derived from the CYP2D6 promoter sequence given in the Sequence Listing (see AAH26169).
                                                                                                                                                                                                                                                       Human CYP2D6 gene 5' flanking region containing polymorphic sites.

```

```
The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenoblotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, us hybridisation-based diagnostic assays, and as components of diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. This sequence represents a single nucleotide polymorphism (SNP) of the human neuregulin-1 associated gene 1 (NRG1AG1) of the invention. The NRG1AG1 gene is also referred to as the human Schizophrenia gene. The invention also relates to fragments or variants of the gene and the invention also relates to fragments or variants of the gene and the Convention also relates they encode. The NRG1AG1 nucleic acids and convention of the polypeptides may be used in the prevention, diagnosts and treatment of diseases associated with inappropriate NRG1AG1 expression. For example, they may be used to treat disorders associated with decreased expression the activity of NRG1AG1 by expressing inactive proteins or to supplement the patients own production of NRG1AG1. Additionally, the gene may be used to produce NRG1AG1 polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The gene may calso be used as DNA probes and primars in diagnostic assays to detect and therefore which patients may be in need of restorative therapy. The CNRG1AG1 polypeptides may also be used as antigens in the production of antibodies against NRG1AG1 and in assays to identify modulators of antibodies and activity. Anti-NRG1AG1 antibodies antagonists.
                                                                                                                                                                          ó
hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Neuregulin-1 associated gene 1 nucleic acids and fragments, useful for preventing diagnosing and treating schizophrenia -

The invention also relates to fragments or variants of the neuregulin I are invention also relates to fragments or variants of the neuregulin I and treatment of diseases associated with inappropriate neuregulin I expression, such as schizophrenia. For example they may be used to treat disorders associated with decreased neuregulin I expression by rectifying mutations or deletions in a patient's genome that affect the actifying neutations or deletions in a patient's genome that affect the actifying neutations or polypeptides. Additionally, the gene may be used to produce the neuregulin I protein, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The gene and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar content in the manner of the content of the content

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptide (II) sequences. (II) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical maging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       printed

    (e) selecting a composition for inhibiting prostate cancer in a patient;
    (f) assessing the prostate cell carcinogento potential of a compound;
    (g) determining whether prostate cancer has metastasized in a patient;
    (h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (d) assessing the efficacy of a therapy for inhibiting prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule (I) compa nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (I) is also useful as a pharmacodyanamic or pharmacogenomic marker.

                                                                                                                                                                                                                                                                                                                                                                                                      with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;

(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; oxidoreductase enzyme; transferase; hydrolase; lyase; isomerase; ligase; hyperproliferative disorder; immunodeficiency disorder; autoimmune disorder; neurological disorder; metabolic disorder; inflammatory disorder; cardiovascular disorder; reproductive disorder; blood-related disorder; infectious disorder; gene therapy; cytostatic; anti arthritic; nephrotropic; anticoagulant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

    is also useful as a pharmacodyanamic or pharmacogenomic marker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-OCT-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-OCT-2000;
    The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, care archive (e.g. cancer), influentials, neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. athma), cardiovascular disorders (e.g. athma), cardiovascular disorders (e.g. athma), cardiovascular disorders (e.g. athma), reproductive disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infertious disorders (e.g. infertility) and infertious disorders (e.g. infertility) and infertion can also be used in gene therapy.

AAS41685-AAS42192 represent DNA sequences encoding for the novel human enzyme polypeptides of the invention can also be used in gene therapy.

ANGUE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPDO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                         Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; oxidoreductase enzyme; transferase; hydrolase; lyase; isomerase; ligase; hyperproliferative disorder; immunodeficiency disorder; autoimmune disorder; neurological disorder; metabolic disorder; inflammatory disorder; cardiovascular disorder; reproductive disorder; blood-related disorder; infectious disorder; gene therapy; cytostatic; anti arthritic; nephrotropic; anticoagulant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polypeptides and polynucleotides useful for diagnosing,

New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system

Claim 1; SEQ ID No 1902; 674pp; English.

Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardior as nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cardiovascular system antigen; human; mouse; rabbit; goat; horse; cat; chicken; sheep; immunosuppressive; antiarthritic; vasctropic; dog; antirheumatic; antiprollferative; cytostatic; cardiant; neuroprotective; ophthalmological; valuedes; fungicide; cancer; ophthalmological; valuerary; gene therapy; autoimmune disease; neoplasm; hyperprollferative disorder; breast; liver; cardiovascular disorder; ds; cerebrovascular disorder; breast; liver; cardiovascular disorder; ds; fungal infection; viral infection; ocular disorder; endocrine disorder; bound healing; skin aging; organ transplantation; tissue regeneration; anti-infertility.
infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigen polypeptides of the invention. Useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimens's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, as glomerulonephritis and respiratory disorders such as astmma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis.

Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the

This transcription initiation regulatory region can be used as part of a method for screening drugs for the treatment of prostate cancer employing prostate specific antigen (PSA) expressing cells comprises a transcriptional initiation region of the PSA enhancer, a promoter and a gene whose expression product provides a detectable signal, where the gene is under the transcriptional control of the initiation region, comprises:

(a) combining the PSA expressing cells with a candidate drug in the presence of an androgen for sufficient time for detectable expression of the gene, and (b) detecting the level of expression of the gene as compared to the level of expression in the absence of the candidate drug. The method can be used to evaluate the potential of a
 specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 XCC
```

```
CC compound as a therapeutic agent for the treatment of prostate
CC cancer. Particularly, anti-androgenic activity can be evaluated as
CC indicative of therapeutic effects for prostate cancer, although any
CC compound which modifies the expression of a prostate-specific gene
CC may be considered a candidate compound.

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished, for Human and Mouse sequences.

Genes and Region of sequences similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons filanked by consensus splice sites that maintained sequence continuity across the splice Junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

This sequence may not represent the entire insert of this
                            clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa.K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (Http://www.resgen.com) or pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacyac.med.buffalo.edu) SOURCE INFORMATION:

VECTOR: pBACC3...
NEIGHBORING SEQUENCE INFORMATION:
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is AC087053; the clone sequenced to the right is RP11-2415, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-559M23; actual end is at base position 17064 of RP11-2415.

Single plasmid coverage exists between bases 30202 to 30267 Location/Qualifiers

NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
